

Goals

In sprint 3 we plan to implement filtering features, the pantry functionality, the calendar and shopping list functionality, and more account management tools. We will improve the overall UI of our app to be consistent and aesthetically pleasing. We will ensure the backend is well structured for holding all of a user's favorites and calendar recipe items. If we have additional time, we will implement accessibility features.

Sprint Backlog

Story 1: Display list of recipes

- a. Add more scraped recipes to database

Story 3: Add recipes to calendar

Story 4: Create Shopping List

Story 5: Allow basic filtering/sorting

- a. Implement better search in the UI
- b. Implement filtering on basic categories
- c. Add more categories for filtering to the database
- d. Improve the appearance of the search view

Story 6: Allow search filtered by pantry items

- a. Must complete story 14 first
- b. Modify database structure to facilitate this filtering
- c. Allow user to select which pantry items they want to search by
- d. Filter search by selected items

Story 12: Details page

- a. Improve UI
- b. Add more information

Story 13: Favorites

- a. Improve UI
- b. Implement in the backend

Story 14: Pantry

Story 15: Account Information Page
